User's manual

CHAUVIN® ARNOUX
CHAUVIN ARNOUX GROUP

CONTENTS

You have just acquired an **F201 clamp multimeter** and we thank you.

For best results from your device :

- **read** this user manual attentively,
- **observe** the precautions for its use.

Meanings of the symbols used on the device

Danger. The operator agrees to refer to this data sheet whenever this danger symbol is encountered.

Application or withdrawal authorized on uninsulated or bare conductors at dangerous voltages.

9 V battery.

The CE marking indicates compliance with European directives.

Double insulation or reinforced insulation.

Selective sorting of wastes for the recycling of electrical and electronic equipment within the European Union.

In conformity with directive DEEE 2002/96/EC: this equipment must not be treated as household waste.

AC – Alternating current.

AC and DC – Alternating and direct current.

Earth.

Risk of electric shock.

PRECAUTIONS FOR USE

This device complies with safety standards IEC-61010-1 and 61010-2-032 for voltages of 1000V in category III or 600V in category IV at an altitude OF less than 2000m, indoors, with a degree of pollution not exceeding 2.
These safety instructions are intended to ensure the safety of persons and proper operation of the device. If the tester is used other than as specified in this data sheet, the protection provided by the device may be impaired.

- The operator and/or the responsible authority must carefully read and clearly understand the various precautions to be taken in use.
- If you use this instrument other than as specified, the protection it provides may be compromised, thereby endangering you.
- Do not use the instrument in an explosive atmosphere or in the presence of flammable gases or fumes.
- Do not use the instrument on networks of which the voltage or category exceeds those mentioned.
- Do not exceed the rated maximum voltages and currents between terminals or with respect to earth.
- Do not use the instrument if it appears to be damaged, incomplete, or not properly closed.
- Before each use, check the condition of the insulation on the leads, housing, and accessories. Any element of which the insulation is deteriorated (even partially) must be set aside for repair or scrapped.
- Use leads and accessories rated for voltages and categories at least equal to those of the instrument. If not, an accessory of a lower category lowers the category of the combined Clamp + accessory to that of the accessory.
- Observe the environmental conditions of use.
- Do not modify the instrument and do not replace components with "equivalents". Repairs and adjustments must be done by approved qualified personnel.
- Replace the battery as soon as the  symbol appears on the display unit. Disconnect all cords before opening the battery compartment cover.
- Use personal protective equipment when conditions require.
- Keep your hands away from the unused terminals of the instrument.
- When handling the test probes, crocodile clips, and clamp ammeters, keep your fingers behind the physical guard.

- As a safety measure, and to avoid repeated overloads on the inputs of the device, we recommend performing configuration operations only when the device is disconnected from all dangerous voltages.

MEASUREMENT CATEGORIES

Definitions of the measurement categories :

CAT II: Circuits directly connected to the low-voltage installation.
Example: power supply to household electrical appliances and portable tools.

CAT III: Power supply circuits in the installation of the building.
Example: distribution panel, circuit-breakers, fixed industrial machines or devices.

CAT IV: Circuits supplying the low-voltage installation of the building.
Example: power lines, meters, and protection devices.

1 PRESENTATION

The F201 is a professional electrical measuring instrument that combines the following functions:

- Current measurement;
- Measurement of inrush current / overcurrent (True-Inrush);
- Voltage measurement;
- Frequency measurement;
- Continuity test with buzzer;
- Resistance measurement;
- Diode test;
- Temperature measurement.

Item	Designation	See §
1	Jaws with centring marks (see connection principles)	3.5 to 3.12
2	Physical guard	-
3	Switch	1.1
4	Function keys	2
5	Display unit	1.3
6	Terminals	1.4
7	Trigger	-

Figure 1 : the F201 clamp multimeter

1.1 THE SWITCH

The switch has five positions. To access the V≈, Ω, A~, °C/°F T, functions, set the switch to the desired function. Each setting is confirmed by an audible signal. The functions are described in the table below.

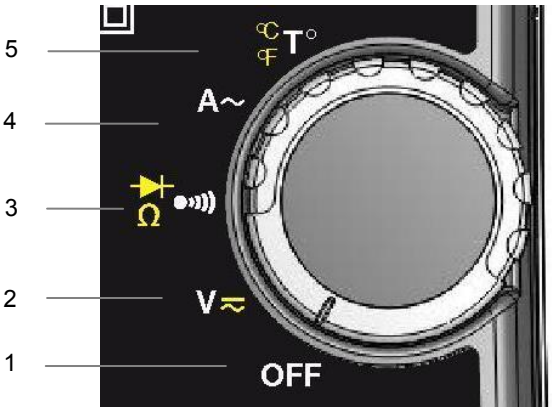

Figure 2 : the switch

Item	Function	See §
1	OFF mode – Switches the clamp multimeter off	3.3
2	AC, DC voltage measurement (V)	3.5
3	Continuity test Resistance measurement Ω Diode test	3.6 3.7 3.8
4	AC current measurement (A)	3.9
5	Temperature measurement (°C/°F)	3.12

1.2 THE KEYS OF THE KEYPAD

Here are the four keys of the keypad :

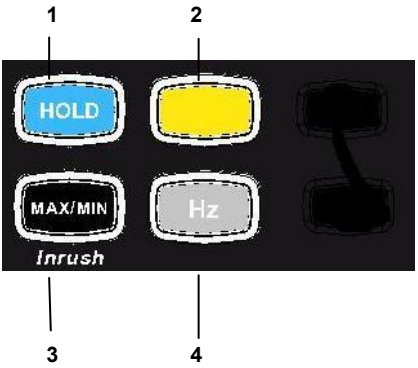

Figure 3 : the keys of the keypad

Item	Function	See §
1	Storage of values, disabling of display Compensation of the resistance of the leads in the continuity and ohmmeter function	2.1 3.6.1
2	Selection of the type of measurement (AC, DC)	2.2
3	Activation or de-activation of the MAX/MIN mode Activation or de-activation of the INRUSH mode in A	2.3
4	Frequency measurements (Hz)	2.4

1.3 THE DISPLAY UNIT

Here is the display unit of the clamp multimeter:

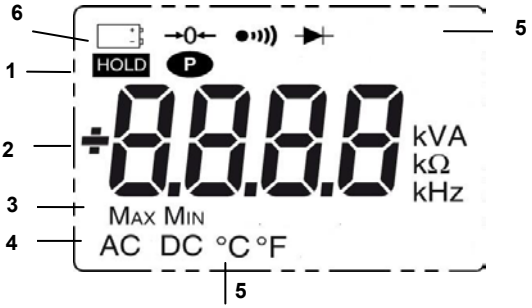

Figure 4 : the display unit

Item	Function	See §
1	Display of the modes selected (keys)	2
2	Display of the measurement value and unit	3.5 to 3.12
3	Display of the MAX/MIN modes	2.3
4	Type of measurement (AC or DC)	2.2
5	Display of the selected modes (switch)	3.5
6	Spent battery indication	5.2

1.3.1 The symbols of the display unit

Symbol	Designation
AC	Alternating current or voltage
DC	Direct voltage
HOLD	Storage of the values and hold of the display
Max	Maximum RMS value
Min	Minimum RMS value
V	Volt

Hz	Hertz
A	Ampere
Ω	Ohm
m	Milli- prefix
k	Kilo- prefix
→0←	Compensation of the resistance of the leads
	Continuity test
	Diode test
P	Permanent display (automatic switching off de-activated)
	Spent battery indicator

1.3.2 Measurement capacity exceeded (O.L)

The **O.L** (Over Load) symbol is displayed when the display capacity is exceeded.

1.4 THE TERMINALS

The terminals are used as follows:

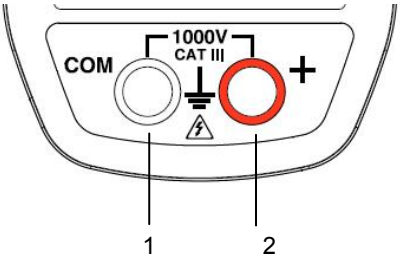

Figure 5 : the terminals

Item	Function
1	Cold terminal **(COM)**
2	Hot terminal **(+)**

2 THE KEYS

The keys of the keypad respond differently to short, long, and sustained presses.
In this section, the ◉ icon represents the possible positions of the switch for which the key concerned has some action.

2.1 HOLD KEY

This key is used to:

- store and look up the last values acquired specific to each function (V, A, Ω, T°) according to the specific modes previously activated (MAX/MIN); the present display is then maintained while the detection and acquisition of new values continues;
- perform automatic compensation of the resistance of the leads (see also § 3.6.1) ;

Successive presses on HOLD	◉	… serve
	V~ Ω A~ °C °F T	1. to store the results of the present measurements 2. to hold the display of the last value displayed 3. to return to normal display mode (the value of each new measurement is displayed)
Sustained	Ω	to perform automatic compensation of the resistance of the leads (see 3.6.1)

See also § 2.4.2 and § 2.5.2 for the action HOLD key with the action of the MAX/MIN key and with the action of the Hz key.

2.2 KEY (SECOND FUNCTION)

This key is used to select the type of measurement (AC, DC) and the second functions marked in yellow next to the relevant positions of the switch.
It can also be used in the configuration mode, to modify the default values (see §3.4)

Remark: the key is invalid in the MAX/MIN and HOLD modes.

Successive presses on		… serve
		-to select AC or DC. Depending on your choice, the screen displays AC or DC
		-to cycle through the Ω and diode test modes and to return to the continuity test
		-to select °C or °F as the unit

2.3 MAX/MIN KEY

2.3.1 In the normal mode

This key activates detection of the MAX and MIN values of the measurements made. Max and Min are the extreme mean values in DC and the extreme RMS values in AC.

Remark : in this mode, the "automatic switching off" function of the device is automatically de-activated. The P symbol is displayed on the screen.

Successive presses on MAX/MIN		… serve
short		-to activate detection of the MAX/MIN values -to display the MAX or MIN value successively -to return to display of the present measurement without exiting from the mode (the values already detected are not erased) *Remark:* the MAX and MIN symbols are both displayed, but only the symbol of the quantity selected blinks. Example: If MIN has been selected, MIN blinks and MAX is lit steadily.
long (> 2 sec)		to exit from the MAX/MIN mode. The values previously recorded are then erased. *Remark:* if the HOLD function is activated, it is not possible to exit from the MAX/MIN mode. The HOLD function must first be de-activated.

2.3.2 The MAX/MIN mode + activation of the HOLD mode

Successive presses on		… serve

MAX/MIN		
short	V~ Hz A~ °C °F T	to display successively the MAX/ MIN values detected before the HOLD key was pressed

Note: the HOLD function does not interrupt the acquisition of new MAX, MIN values

2.3.3 Access to the True-INRUSH mode (MAX/MIN set to A~)

This key allows measurement of the True-Inrush current (starting current, or overcurrent in steady-state operation).

Successive presses on MAX/MIN		**…serves**
long (>2 sec)	A~	**to enter** the True-INRUSH mode -"Inrh" is displayed for 3s (the backlighting blinks) -the triggering threshold is displayed for 5s (the backlighting is steady); -"------" is displayed and the "A" symbol flashes -after detection and acquisition, the inrush current measurement is displayed, after the calculations stage "------" (backlighting off) ***Remark:*** the A symbol flashes to indicate "surveillance" of the signal. **to exit** from the True-INRUSH mode (return to simple current measurement).
short (<2 sec) ***Note:*** a short press is functional only if an True-Inrush value has been detected.	A~	-to display the PEAK+ value of the current -to display the PEAK- value of the current -to display the RMS True-Inrush current ***Remark:*** the A symbol is displayed steadily during this sequence.

2.4 Hz KEY

This key is used to display the frequency measurements of a signal.

Remark : this key is not working in DC mode.

2.4.1 The Hz function in the normal model

Successive presses on Hz		…serves
	V~ A~	to display: -the frequency of the signal measured -the present voltage (V) or current (A) measurement

2.4.2 The Hz function + activation of the HOLD mode

Successive presses on Hz		…serves
	V~ A~	-to store the frequency -to display successively the stored frequency, then the voltage or the current

3 USE

3.1 COMMISSIONING

Insert the battery supplied with the device as follows:

1. Using a screwdriver, unscrew the screw of the battery compartment cover (item 1) on the back of the housing and open it.
2. Place the battery in the compartment (item 2), taking care to get the polarities right.
3. Close the battery compartment cover and screw it to the housing.

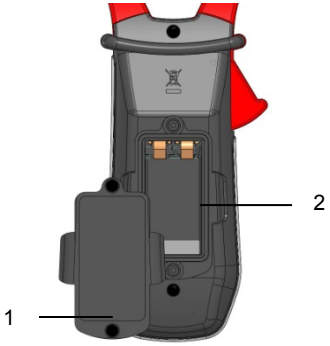

Figure 6 : the battery compartment cover

3.2 STARTING UP THE CLAMP MULTIMETER

The switch is set to OFF. Turn the switch to the function of your choice. The whole display lights (all symbols) for a few seconds (see §1.3), then the screen of the function chosen is displayed. The clamp multimeter is then ready to make measurements.

3.3 SWITCHING THE CLAMP MULTIMETER

The clamp multimeter can be switched off either manually, by setting the switch to OFF, or automatically, after ten minutes with no action on the switch and/or the keys. Thirty (30) seconds before the device is switched off, an audible signal sounds intermittently. To re-activate the device, press any key or turn the switch.

3.4 CONFIGURATION

As a safety measure, and to avoid repeated overloads on the inputs of the device, we recommend performing configuration operations only when the device is disconnected from all dangerous voltages.

3.4.1 Programming of the maximum resistance allowed for a continuity

To program the maximum resistance allowed for a continuity

1. From the OFF position, hold the key down while turning the switch to , until the "full screen" display ends and a beep is emitted, to enter the configuration mode. The display unit indicates the value below which the buzzer is activated and the symbol is displayed. The value stored by default is 40Ω. The possible values lie between 1Ω and 599Ω.
2. To change the threshold, press the key. The right-hand digit flashes: each press on the key increments it. To shift to the next digit, apply a long press (>2s) to the key.

To exit from the programming mode, turn the switch to another setting. The detection threshold chosen is stored (emission of a double beep).

3.4.2 De-activation of automatic switching off (Auto Power OFF)

To de-activate automatic switching off:

In the OFF position, hold the HOLD key down while turning the switch to , until the "full screen" display ends and a beep is emitted, to enter the configuration mode. The P symbol is displayed.

When the HOLD key is released, the device is in the voltmeter function in the normal mode.

The return to Auto Power OFF takes place when the clamp is switched back on.

3.4.3 Programming of the current threshold for the True INRUSH measurement

To program the triggering current threshold of the True INRUSH measurement:

1. in the OFF position, hold the MAX/MIN key down while turning the switch to , until the "full screen" display ends and a beep is emitted, to enter the configuration mode. The display unit indicates the percentage overshoot to

apply to the measured current to determine the measurement triggering threshold.
The value stored by default is 10%, representing 110% of the established current measured. The possible values are 5%, 10%, 20%, 50%, 70%, 100%, 150%, and 200%.

2. To change the threshold, press the key. The value flashes: each press on the key displays the next value. To record the chosen threshold, apply a long press (>2s) on the key. A confirmation beep is emitted.

To exit from the programming mode, turn the switch to another setting. The chosen threshold is stored (emission of a double beep).

Note: The starting (Inrush) current measurement triggering threshold is fixed at 1% of the least sensitive range. This threshold is not adjustable

3.4.4 Change of temperature measurement unit

To program the measurement unit, °C or °F:

1. In the OFF position, hold the key down while turning the switch to  , until the "full screen" display ends and a beep is emitted, to enter the configuration mode. The display unit indicates the existing unit (°C or °F). The default unit is °C.
2. Pressing the key toggles between °C and °F.

When the desired unit is displayed, turn the switch to another setting. The unit chosen is stored (emission of a double beep).

3.4.5 Default configuration

To reset the clamp to its default parameters (factory configuration):

In the OFF position, hold the key down while turning the switch to A~, until the "full screen" display ends and a beep is emitted, to enter the configuration mode. The "rSt" symbol is displayed.

After 2 s, the clamp emits a double beep, then all of the symbols of the screen are displayed until the key is released. The default parameters are then restored:

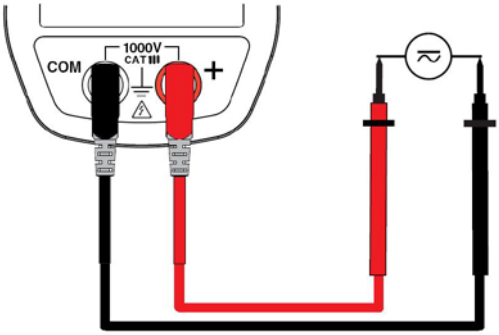
Continuity detection threshold =40Ω
True Inrush triggering threshold =10%
Temperature measurement unit =°C

3.5 VOLTAGE MEASUREMENT (V)

To measure a voltage, proceed as follows :

1. Set the switch to V~ ;
2. Connect the black lead to the COM terminal and the red lead to "+".
3. Place the test probes or the crocodile clips on the terminals of the circuit to be measured. The device selects AC or DC automatically according to which measured value is larger. The AC or DC symbol lights in blinking mode.

To select AC or DC manually, press the yellow key to reach the desired choice. The symbol corresponding to the choice made then lights in fixed mode.

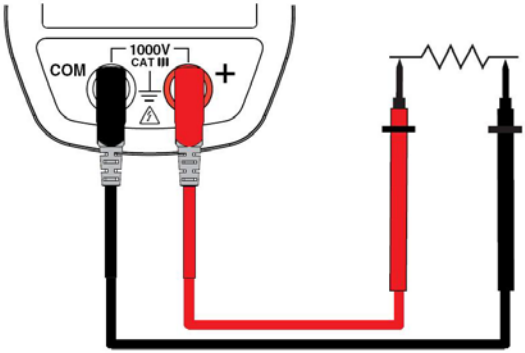


The measured value is displayed on the screen.

3.6 CONTINUITY TEST

Warning : Before performing the test, make sure that the circuit is off and any capacitors have been discharged.

1. Set the switch to ; the symbol is displayed ;
2. Connect the black lead to the COM terminal and the red lead to «+».
3. Place the test probes or the crocodile clips on the terminals of the circuit or component to be tested.



An audible signal is emitted if there is continuity, and the measured value is displayed on the screen.

3.6.1 Automatic compensation of the resistance of the leads

Warning : before the compensation is executed, the MAX/MIN and HOLD modes must be de-activated.

To perform automatic compensation of the resistance of the leads, proceed as follows:

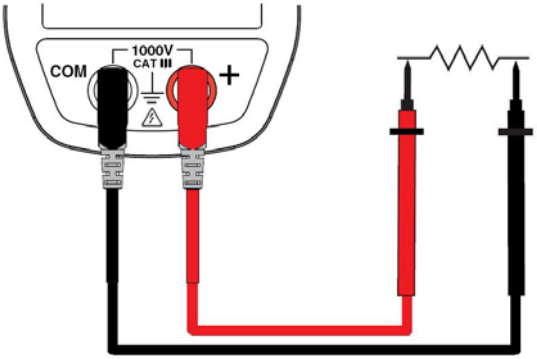
1. Short-circuit the leads connected to the device.
2. Hold the HOLD key down until the display unit indicates the lowest value. The device measures the resistance of the leads.
3. Release the HOLD key. The correction and the →0← symbole are displayed. The value displayed is stored.

Remark : the correction value is stored only if it is
≤ 2 Ω. Above 2 Ω, the value displayed blinks and is not stored.

3.7 RESISTANCE MEASUREMENT Ω

Warning : Before making a resistance measurement, make sure that the circuit is cold and any capacitors have been discharged.

1. Set the switch to and press the key. The **Ω** symbol is displayed;
2. Connect the black lead to the **COM** terminal and the red lead to « **+** »;
3. Place the test probes or the crocodile clips on the terminals of the circuit or component to be measured ;



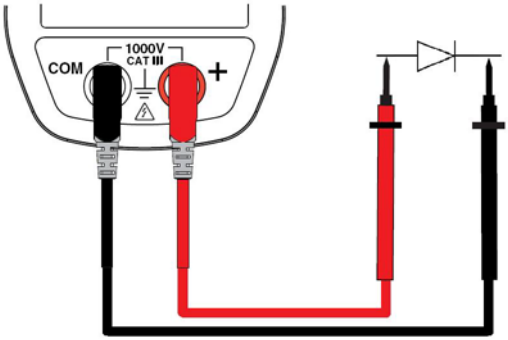
The measured value is displayed on the screen

Remark : to measure low resistance values, first carry out the compensation of the resistance of the leads (see § 3.6.1).

3.8 DIODE TEST

Warning: Before performing the diode test, make sure that the circuit is cold and any capacitors have been discharged.

1. Set the switch to and press the key twice. The symbol is displayed.
2. Connect the black lead to the COM terminal and the red lead to «+».
3. Place the test probes or the crocodile clips on the terminals of the component to be tested.



The measured value is displayed on the screen.

3.9 CURRENT MEASUREMENT (A)

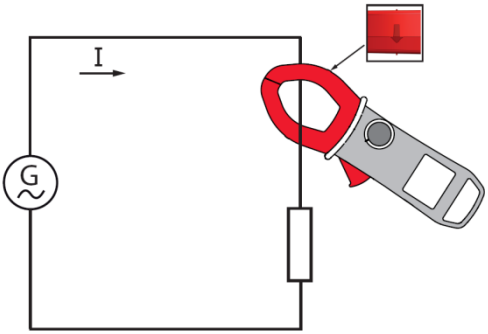
The jaws are opened by pressing the trigger on the body of the device. The arrow on the jaws of the clamp (see the diagram below) must point in the presumed direction of flow of the current, from the generator to the load. Make sure that the jaws have closed correctly.

Remark: the measurement results are optimal when the conductor is centred in the jaws (aligned with the centring marks).

3.9.1 AC measurement

For an AC current measurement, proceed as follows:

1. Set the switch to A~ .
2. Encircle only the conductor concerned with the clamp ;



The measured value is displayed on the screen.

3.10 STARTING CURRENT OR OVERCURRENT (TRUE INRUSH) MEASUREMENT

To measure a starting True-Inrush current, proceed as follows:

1. Set the switch to A~ then encircle only the conductor concerned with the clamp.
2. Effect a long press on the MAX/MIN key. The InRh symbol is displayed, then the triggering threshold. The clamp then awaits detection of the True-Inrush current.
   "------" is displayed and the "A" symbol flashes.
3. After detection and acquisition for 100 ms, the RMS value of the True-Inrush current is displayed along with the PEAK+/PEAK- values subsequently.
4. A long press on the MAX/MIN key or a change of function leads to exiting from the True-Inrush mode.

Remark : the triggering threshold in A is 6A if the initial current is zero (starting of installation); it is that set in the configuration (see §3.4.3) for an established current (overload in a installation)..

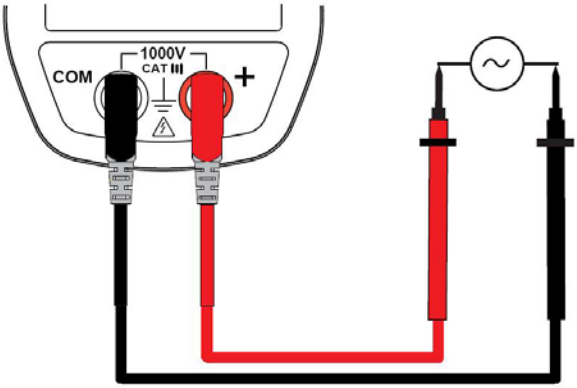
3.11 FREQUENCY MEASUREMENT (HZ)

The frequency measurement is available in V and A for AC quantities. The measurement is based on a count of the passages of the signal through zero (positive-going edges).

3.11.1 Frequency measurement in voltage

To measure the frequency in voltage, proceed as follows:

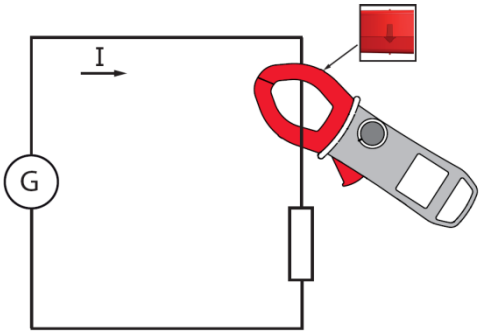
1. Set the switch to V~ and press the Hz key. The Hz symbol is displayed.
2. Select AC by pressing the yellow key until the desired choice is reached.
3. Connect the black lead to the COM terminal and the red lead to “+”.
4. Place the test probes or the crocodile clips on the terminals of the circuit to be measured.



The measured value is displayed on the screen.

3.11.2 Frequency measurement in current

1. Set the switch to A~ and press the Hz key. The Hz symbol is displayed.
2. Encircle only the conductor concerned with the clamp.



The measured value is displayed on the screen.

3.12 TEMPERATURE MEASUREMENT

3.12.1 Measurement without external sensor

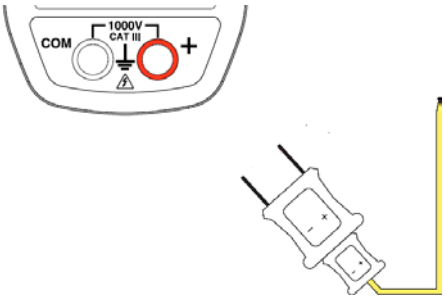
1. Set the switch to °C °F T°;

The temperature displayed (blinking) is the internal temperature of the device, equal to the ambient temperature after a sufficiently long thermal stabilization time (at least one hour).

3.12.2 Measurement with external sensor

The device measures the temperature using a K thermocouple.

1. Connect the K thermocouple to the + and COM input terminals of the device.
2. Set the switch to °C °F T°.
3. Place the K thermocouple on the element or zone to be measured, which must not be at a dangerous voltage.



The temperature is displayed on the screen.

To change the unit,, °F or °C, press the key.

Remarks :

- If the external sensor is defective, the temperature displayed blinks.
- If there are large variations of the environment of the device, the measurement must be preceded by a stabilization time.

4 CHARACTERISTICS

4.1 REFERENCE CONDITIONS

Quantities of influence	Reference conditions
Temperature:	23°C ±2°C
Relative humidity:	45% to 75%
Supply voltage:	9.0V ±0.5V
Frequency range of the applied signal:	45–65Hz
Sine wave:	pure
Peak factor of the applied alternating signal:	√2
Position of the conductor in the clamp:	centred
Adjacent conductors:	none
Alternating magnetic field:	none
Electric field:	none

4.2 CHARACTERISTICS UNDER THE REFERENCE CONDITIONS

The uncertainties are expressed in ± (x% of the reading (R) + y points (pt)).

4.2.1 DC voltage measurement

Measurement range	0.00 V to 59.99 V	60.0 V to 599.9 V	600 V to 1000V (1)
Specified measurement range	0 to 100% of the measurement range		
Uncertainties	from 0.00 V to 5.99 V ±(1% R + 10 pt) from 6.00 V to 59.99 V ±(1% R +3 pt)	±(1% R +3 pt)	
Resolution	0.01 V	0.1 V	1 V
Input impedance	10 MΩ		

Note (1) *Above 1000V, a repetitive beep indicates that the voltage being measured is greater than the safety voltage for which the device is guaranteed.*

4.2.2 AC voltage measurement

Measurement range	0.15 V to 59.99 V	60.0 V to 599.9 V	600 V to 1000V RMS 1400V peak (1)
Specified measurement range (2)	0 to 100% of the measurement range		
Uncertainties	from 0.15 V to 5.99V ± (1% R + 10 pt) from 6.00 V to 59.99 V ± (1% R +3 pt)	± (1% R +3 pt)	
Resolution	0.01 V	0.1 V	1 V
Input impedance	10MΩ		

Note (1) *Above 1000V RMS, a repetitive beep indicates that the voltage being measured is greater than the safety voltage for which the device is guaranteed.*
The bandwidth is 3 kHz in AC

Note (2) *Any value between zero and the min. threshold of the measurement range (0.15V) is forced to "----" on the display*

Specific characteristics in MAX/MIN mode (from 10Hz to 1kHz in AC, from 0.30V) :

- Uncertainties: add 1% L to the values of the table above.
- Capture time of the extrema: approximately 100ms.

4.2.3 AC current measurement

Measurement range (2)	0.15 A to 59.99 A	60.0 A to 599.9 A	600 A (1)
Specified measurement range	0 to 100% of the measurement range		
Uncertainties	± (1% R + 10 pt)	± (1% R +3 pt)	
Resolution	0.01A	0.1A	1A

Note (1) *The bandwidth is 3 kHz in AC*

Note (2) *Any value between zero and the min. threshold of the measurement range (0.15A) is forced to "----" on the display.*

Specific characteristics in MAX/MIN mode (from 10Hz to 1kHz in AC, from 0.30A):

- Uncertainties: add 1% L to the values of the table above.
- Capture time of the extrema: approximately 100ms.

4.2.4 True-Inrush measurement

Measurement range	6 A to 600 A AC
Specified measurement range	0 to 100% of the measurement range
Uncertainties	± (5% R + 5 pt)
Resolution	1 A

Specific characteristics in PEAK mode in True-Inrush (from 10Hz to 1 kHz AC):

- Uncertainties: add ± (1.5% L+0.5A) to the values in the tables above.
- PEAK capture time: 1ms min. to 1.5ms max.

4.2.5 Continuity measurement

Measurement range	0.0 Ω to 599.9 Ω
Open-circuit voltage	≤ 3,6 V
Measurement current	550 µA
Uncertainties	± (1% R +5 pt)
Buzzer triggering threshold	Adjustable from 1Ω to 599Ω (40Ω is the default)

4.2.6 Resistance measurement

Measurement range (1)	0.0 Ω to 599.9 Ω	600 Ω to 5999 Ω	6,00 kΩ to 59.99 kΩ
Specified measurement range	1 to 100% of the measurement range	0 to 100% of the measurement range	
Uncertainties	± (1% R +5 pt)		
Resolution	0.1Ω	1Ω	10Ω
Open-circuit voltage	≤ 3,6 V		
Measurement current	550µA	100µA	10µA

Note (1) *Above the maximum display value, the display unit indicates "OL".*

- The "-" and "+" signs are not managed.

Specific characteristics in MAX/MIN mode:

- Uncertainties: add 1% R to the values of the table above.
- Capture time of the extrema: approximately 100ms.

4.2.7 Diode test

Measurement range	0.000V to 3.199V DC
Specified measurement range	1 to 100% of the measurement range
Uncertainties	± (1% R + 10 pt)
Resolution	0.001V
Measurement current	0,55 mA
Indication: junction reversed or open-circuit	Display of "OL" when the measured voltage >3.199V

☞ **Note** : The "-" sign is disabled for the diode test function.

4.2.8 Frequency measurements

4.2.8.1 Characteristics in voltage

Measurement range (1)	5.0 Hz to 599.9 Hz	600 Hz to 5999 Hz	6,00 kHz to 19,99 kHz
Specified measurement range	1 to 100% of the measurement range	0 to 100% of the measurement range	
Uncertainties	± (0.4% R + 1 pt)		
Resolution	0.1 Hz	1 Hz	10 Hz

4.2.8.2 Characteristics in current

Measurement range (1)	5.0 Hz to 599.9 Hz	600 Hz to 2999 Hz
Specified measurement range	1 to 100% of the measurement range	0 to 100% of the measurement range
Uncertainties	± (0.4% R + 1 pt)	
Resolution	0.1Hz	1Hz

Note (1) *- If the level of the signal is too low (U<3V or I<3A) or if the frequency is less than 5Hz, the device cannot determine the frequency and displays dashes "----"*

Specific characteristics in MAX/MIN mode (from 10Hz to 5kHz in voltage and from 10Hz to 1kHz in current):

- Uncertainties: add 1% R to the values of the table above.
- Capture time of the extrema: approximately 100ms.

4.2.9 Temperature measurement

Function	External temperature	
Type of sensor	K thermocouple	
Operating range	-60.0°C to +599.9°C -76.0°F to +1111.8°F	+600°C to +1200°C +1112°F to +2192°F
Specified measurement range	1 to 100% of the measurement range	0 to 100% of the measurement range
Uncertainties (1)	1% R ±3°C 1% R ±5.4°F	1% R ±3°C 1% R ±5.4°F
Resolution	0.1°C 0.1°F	1°C 1°F

Note (1) *The stated external temperature measurement accuracy does not take the accuracy of the K thermocouple into account.*

Note 2 *use of the thermal time constant (0.7min/°C):*
If there is a sudden variation of the temperature of the clamp, by 10°C for example, the clamp will be at 99% (cnst= 5) of the final temperature after 0.7min/°Cx10°Cx5= 35 min (to which must be added the constant of the external sensor).

Specific characteristics in MAX/MIN mode:

- Uncertainties: add 1% R to the values of the table above.
- Capture time of the extrema: approximately 100ms.

4.3 ENVIRONMENTAL CONDITIONS

Environmental conditions	in use	in storage
Temperature	-20 C to + 55 C	-40 °C to + 70°C
Relative humidity (RH):	≤90% at 55°C	≤90% up to 70° C

4.4 CHARACTERISTICS OF CONSTRUCTION

Housing:	Rigid polycarbonate shell with moulded elastomer covering
Jaws:	Polycarbonate Opening: 34 mm Clamping diameter: 34 mm
Screen:	LCD display unit Dimension: 28 x 43.5 mm
Dimension:	H-222 x W-78 x D-42 mm
Weight:	340g (with the battery)

4.5 POWER SUPPLY

Battery :	1 x 9 V LF22
Mean life :	>130 hours
Duration of operation before automatic switching off:	After 10 minutes without action on the switch and/or keys

4.6 COMPLIANCE WITH INTERNATIONAL STANDARDS

Electric safety:	Compliant with standards IEC-61010-1, IEC-61010-2-30, and IEC-61010-2-32: 1000V CAT-III or 600V CAT IV.
Electromagnetic compatibility:	Compliant with standard EN-61326-1 Classification: residential environment
Mechanical strength:	Free fall: 2m (in accordance with standard IEC-68-2-32)
Level of protection of the housing:	IP40 (per standard IEC-60529)

4.7 VARIATIONS IN THE DOMAIN OF USE

Quantity of	Range of	Quantity	Influence

influence	influence	influenced	Typical	MAX
Temperature	-20...+55°C	V AC V DC A T°C Hz Ω ⊣▶⊢	- 0,1%R/10°C 1%R/10°C (0,2%R+1°C)/10°C 0,1%R/10°C + 2ct	0,1%R/10°C 0,5%R/10°C + 2 ct 1,5%R/10°C + 2ct (0,3%R+2°C)/10°C 0,1%R/10°C + 3ct
Humidity	10%...90%RH	V A	0.1%R	0.1%R + 1 ct
Frequency	10Hz...1kHz 1kHz...3kHz 10Hz…400Hz 400Hz…3kHz	V A	1%R 8%R 1%R 4%R	1%R + 1 ct 9%R + 1 ct 1%R + 1 ct 5%R + 1 ct
Position of the conductor in the jaws (f≤400Hz)	Any position on the internal perimeter of the jaws	A	2%R	4%R + 1 ct
Adjacent conductor carrying a current of 150 A DC or RMS	Conductor touching the external perimeter of the jaws	A	42 dB	35 dB
Conductor enclosed by the clamp	0-500 A RMS	V	< 1 ct	1 ct
Application of a voltage on the clamp	0-1000V DC or RMS	A	< 1 ct	3% R + 1 ct
peak factor	1.4 to 3.5, limited to 900A peak 1,400V peak	A (AC) V (AC)	1%R 1%R	3% R + 1 ct

5 MAINTENANCE

The instrument has no parts that can be replaced by personnel who are not trained and approved. Any non-approved repair or other work, or replacement of a part by an "equivalent", may severely compromise safety.

5.1 CLEANING

- Disconnect everything connected to the device and set the switch to OFF.
- Use a soft cloth moistened with soapy water. Rinse with a damp cloth and dry quickly using a dry cloth or forced air.
- Dry perfectly before putting back into use.

5.2 REPLACEMENT OF THE BATTERY

The  symbol indicates that the battery is spent. When this symbol appears on the display unit, the battery must be replaced. The measurements and specifications are no longer guaranteed.

To replace the battery, proceed as follows:

1. Disconnect the measurement leads from the input terminals.
2. Set the switch to OFF.
3. Use a screwdriver to unscrew the screw securing the battery compartment cover to the back of the housing and open the cover (see §3.1).
4. Replace the battery (see §3.1).
5. Close the cover and screw it to the housing.

5.3 METROLOGICAL CHECK

Like all measuring or testing devices, the instrument must be checked regularly.
This instrument should be checked at least once a year. For checks and calibrations, contact one of our accredited metrology laboratories (information and contact details available on request), at our Chauvin Arnoux subsidiary or the branch in your country.

5.4 REPAIR

For all repairs before or after expiry of warranty, please return the device to your distributor.

6 WARRANTY

Except as otherwise stipulated, our warranty is valid for three years starting from the date on which the equipment was sold. Extract from our General Conditions of Sale provided on request.
The warranty does not apply in the following cases:

- Inappropriate use of the equipment or use with incompatible equipment;
- Modifications made to the equipment without the explicit permission of the manufacturer's technical staff;
- Work done on the device by a person not approved by the manufacturer;
- Adaptation to a particular application not anticipated in the definition of the equipment or not indicated in the user's manual;
- Damage caused by shocks, falls, or floods.

7 DELIVERY CONDITION

The **F201** clamp multimeter is delivered in its packaging box with :

- 2 banana-test probes leads, one red and one black
- 1 K thermocouple with banana terminations
- 1 9V battery
- 1 carrying bag
- the multilingual user guide on a mini-CD
- the multilingual getting started guide
